Hybrid Cards – Complete Manual

What is a hybrid card?

A hybrid card shows a different word up close than from a distance. The effect is based on blur, edge information and visual perception.

Basic principle

The on-stage spectator sees the near word. The audience reads the far word from a distance.

Step by step

1. Enter the far word.

2. Check or generate the near word.

3. Adjust sliders and previews.

Sliders explained

Font size controls distance readability.

Far blur stabilises the far word.

Far halo adds a soft glow.

Near edges increase close-up clarity.

Near fill adds a grey interior.

Opacity controls overall near-word visibility.

Previews

Near preview shows the spectator view.

Far preview simulates the audience view.

Export options

Single PNG: A5 front.

A4 PNG: Two identical fronts.

A4 PDF: Front and back for printing.
